KeyShot Render Training

Course Overview

KeyShot is the fastest and easiest to use 3D rendering and animation software available. In just a few steps you can create amazing looking images from your 3D models that can be used throughout the product development process to make design decisions and quickly create variations of concepts for customer, manufacturing or marketing.

Successful completion of this course will allow users to Import and manipulate models and assemblies inside KeyShot, assign and create materials and textures which includes bump, specular and opacity maps. Create realistic lighting environments, create and edit cameras. In our advanced course, you can then learn to create animations and interactive VR images (h).

Who Should Attend?

Our courses are suitable for anyone who looks to create and render high quality imagery.

Course Agenda: 1 Day

- KeyShot Overview
- Directory Structure
- User Interface
- Importing and working with data
- Materials
- Texturing
- KeyShot VR (Pro license feature)
- Labeling
- Lighting
- Real-time Settings
- Backplates
- Working with cameras
- Rendering and output
- Animations (Pro license feature)

Recommended Courses

- Any NX CAD related courses focused on image creation

Welcome to TEAM

The TEAM Difference? ...is the people we employ within the Company. Our engineering team come with many years of invaluable industry experience. Coupled with this is our long track record with both the software and our commitment to supporting our many customers who design using Siemens PLM technology.

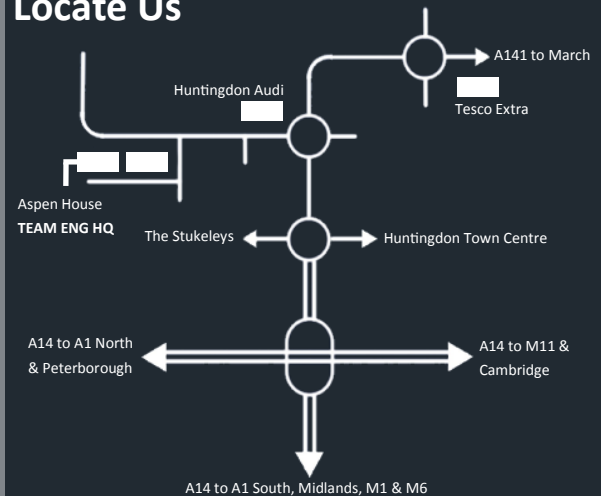

We like to think we have all the answers, but in fact, we listen first; then we work together - as a TEAM.
